

INSTALLATION GUIDE FOR BELOW-GRADE WATERPROOFING

INSTALLATION RECOMMENDED BY RESISTO

1

Start by protecting all interior and exterior corners. Note that PRIMER IS ALWAYS REQUIRED on concrete, blocks, and wood.

2

Install 12 in (30 cm) reinforcements at the bottom of the foundation. Use a membrane roller to ensure good adhesion of the membranes.

3

Apply reinforcement strips of 12 in (30 cm) at 6 in (15 cm) on the wall and 6 in (15 cm) on the footing over the entire foundation.

4

Install a 12 in (30 cm) membrane strip on each inside corner.

5

Allow a minimum overlap of 3 in (7.6 cm) between each membrane strip.

6

All exterior corners must be protected with two layers of membrane.

RESISTO®

Please contact your dealer directly or go to www.resisto.ca for more information about this product.

7

Install the full pieces of membrane, and make sure that they completely cover the joints and the ends of the reinforcement pieces.

8

It is recommended to mechanically fasten the top termination of the membrane with a termination bar.

9

Finish by adding a bead of elastomeric sealant to the top and bottom of the membrane.

10

It is recommended to install a protective panel, such as SOPRA-XPS, if the soil contains clay, or to protect the membrane during backfilling.
